Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant made note of interview with Blake Betz (filed 08/23/2005) where amendment to claims had been discussed to try to put application in conditions for allowance. However, the interview summary provided fails to provide information on such amendments. Inventor provided a brief overview of invention, stating the electrical distribution network is interchangeable with power lines. Furthermore, the invention uses these power lines/electrical lines as also communication lines to provide feedback of the network. Additionally, the invention can be used as a quality of service where (as an example) the system can detect problems before they happen (e.g. tree brushing up against a power line). In regards to the term "line segment", Applicant argued that Wobben fails to teach line segments. Instead, Wobben teaches monitoring the overall network. However, Examiner questioned the definition of line segment. Applicant pointed to Fig. 1B of the application for explanation. Examiner responded that from one hub to another hub can be considered a line segment. No agreement was reached.
